Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Plays a role as a receptor for the recognition of MHC class I HLA-E molecules by NK cells and some cytotoxic T-cells.
-!- SUBUNIT: Can form disulfide-bonded heterodimer with NKG2 family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -:- SUBCECLULAR LOCATION: Type II membrane protein.

-I Struct. Biol. 4:438-44. (1997).

-I FUNCTION: Anticoagulant protein which binds with factor IX and factor X in the presence of calcium with a 1 to 1 stoichiometry.

-I SUBUNIT: Heterodimer of chains A and B; disulfide-linked.

-I SUBCELLULAR LOCATION: Secreted.

-I MISCELLANBOUS: Calcium is required for ligand binding.

-I SIMILARITY: Contains 1 C-type lectin family domain.

Biochemistry 38:7584-7593(1999).
-!- FUNCTION: A potent inhibitor of collagen-induced platelet aggregation. Individually, neither subunit inhibits platelet aggregation. Both subunits are essential.
-!- SUBUNIT: Heterodimer of one alpha and one beta subunit held together by noncovalent interactions rather than by intersubunit disulfide bridges.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The smith and related viper venom proteins to the platelet membrane albolabris and related viper venom proteins to the platelet membrane glycoprotein ID-T-X complex. Effect on platelet aggregation and to glycoprotein ID-mediated platelet activation.";
Elochemistry 35:12629-12639(1996).
I. FUNCTION: Binds to platelet GPIB/IX receptor system, inhibits VWF binding, and stimulates agglutination.
I. SUBUNIT: Heterodimer of alpha and beta subunits; disulfide-linked.
I. SUBCELIULAR LOCATION: Secreted.
I. SUBCELIULAR LOCATION: Screted.
II. SIMILARITY: Contains 1 C-type lectin family domain.

Pharmaceutical composition for treating tumor by stimulating cytotoxic activity of natural killer cell or T-cell, comprises an agent that binds to mast cell function-associated antigen ligand on target cell.

Example 1; Page 19; 49pp; English.

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (WAFA) ligand on a target cell, and prevents or inhibits natural killer (NK) - or T-cell-expressed cell surface MAFA from binding to MAFA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAFA binding to a ligand on a target cell, by contacting the pharmaceutical

combination with the MAFA to prevent inflammatory and allergic reactions

```
composition in vitro, ex vivo or in vivo by administering the composition an amount sufficient to inhibit cell surface MAFA binding to the ligand on the target cell. The agent or the composition is useful for treating a tummour by stimulating the cytotoxic activity of an NK cell or treating tumour by stimulating the cytotoxic activity of an NK cell or a cytotoxic tumour cell. The invention is also useful for inhibiting an activity of NK cell or a receiptible tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell.
                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                        LFGEYLGQDFYWIGLRNIDGWRWEGGPALSLRILTNSLIQRCGAIHRNGLQASSCEVALQ 180

                                                                                                                                                                   This is the amino acid sequence of rat mast cell function-associated antigen (MAFA), a type II membrane glycoprotein found on mast cells and basophils. The invention relates to cloning of the human MAFA molecule (see AAW82265) and to the discovery of splice variants (see AAW882667) of human MAFA that are not found in rat. Polypeptides and synthetic

Mikayama Takahashi N,

2001-611482/70. N-PSDB; AAD18736 irmaceutical composition for treating tumor by stimulating cytotoxic sivity of natural killer cell or T-cell, comprises an agent that binds mast cell function-associated antigen ligand on target cell. Pharmaceutical activity of

Example 1; Page 19; 49pp; English.

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (WAFA) ligand on a target cell, and prevents or inhibits natural killer (NK) - or T-cell-expressed cell surface MAFA from binding to MAFA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAFA binding to a ligand on a target cell, by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition

```
0
to the subject, to NK or T-cell or the target cell e.g. tumour cell, in an amount sufficient to inhibit cell surface MAPA binding to the ligand on the target cell. The agent or the composition is useful for treating a tumour by stimulating the cytotoxic activity of an NK cell for a cytotoxic tumour by stimulating the cytotoxic activity of an NK cell or a cytotoxic tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is rat MAPA protein
                                                                                                                                                                                                                                                                                                                                                        CCGSKDSTCSHCPSCPILWTRNGSHCYYFSMEKKDWNSSLKFCADKGSHLLTFPDNQGVK 120

This sequence can be used in a method resulting in the production of recombinant protein expressed by NK and T cells, which may inhibit cell-mediated cytotoxicity, e.g. in transplant rejection or autoimmune diseases, or may be used to produce antibodies for diagnostic or therapeutic use
                                                                                                                                                                                                                                                                                                                                       Kp43; human; natural killer cell surface antigen; NK; T cell; inhibitor; cell-mediated cytotoxicity; transplant rejection; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding natural killer cell surface antigen Kp43 - and transformed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polypeptide having a sequence corresponding to human mast cell function—associated antigen - useful in forming and manufacturing pharmaceutical compositions in the treatment of inflammatory and allergic diseases, and tumour growth.
                                                                                              134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is the amino acid sequence of human mast cell function- associated antigen (MAFA) splice variant huMAFA(ES/4-), which lacks the C-lectin-like domain of human MAPA (see AAMB8265) but retains the intracellular and transmembrane domains as well as the extracellular C-terminal tail. Truncated MAFA polypeptides including huMAFA(E3/4-), and polynucleotides encoding them, as well as synthetic peptides (see AAWB8258-64, AAWB8268-72), can be used be used in compositions for the treatment of inflammatory and allergic diseases (e.g. rheumatoid arthritis and asthma), or tumour growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The type II integral membrane proteins (AAW40219-W40221) and CD94 (AAW40222) form a group which has 20% homology with the human macrophage antigen (TMAH) (AAW40212). The homology which TWAH shares with this group includes a series of disulphide residues. The structural homology between the peptides provides information on the structural and physical properties of both the TMAH gene and protein. This is used in the development of TWAH as a disapnostic tool and as a method of treating diseases associated with expression of TWAH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human macrophage antigen - used for decreasing apoptosis associated with osteoarthritis.

The invention relates to a composition comprising several CDNAs that are differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hypertension, type II diabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method of screening several molecules or compounds to identify a ligand which specifically binds a CDNA. A protein encoded by the CDNA is useful for a high-throughput method for using a protein to screen several molecules or compounds to identify at least one ligand which specifically binds the compounds to identify at least one ligand which specifically binds the protein which involves compounds under conditions to allow specific compounds and detecting specific binding between the protein and a condition of binding, and detecting specific binding between the protein and and composition is useful for detecting and composition is useful for detecting and to design a treatment regimen and to monitor the efficacy of treatment. The present sequence represents the amino acid a protein encoded by a CDNA differentially expressed in a protein and an expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                7;

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to eytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynuclaotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, or activity, immunomodulatory activity and activity, and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Noter Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               70 SHCPSCPILWTRNGSHCYYFSMEKKDWNSSLKFCADKGSHLLTFPDNQCVKLFGEYLGQD 129

```
The invention relates to an isolated polynucleotide encoding a cytokine or cell proliferation/differentiation-related protein (or the mature protein or active domain), sequences greater than 0% identical to it or sequences complementary to it. Also included are the encoded proteins, expression vectors, transformed host cells, antibodies, and identifying a compound that binds to the polypeptide. The polynucleotide, polypeptides encoded by it, or antibodies to the polypeptides are useful in therapeutic, diagnostic or research methods. They are particularly useful for diagnosing, treating or preventing e.g. anaemias, wounds, ulcers, thrombocytopaenia, osteoporosis, osteoarthritis, inflammations. Alzheimer's disease, Parkinson's disease, Huntington's disease, amyotrophic lateral scleonis, stroke, immune deficiences (e.g. human amyotrophic lateral scleonis, stroke, immune deficiences (e.g. human
                                                                                                                                                 wound; ulcer; thrombocytopaenia; osteoporosis; osteoarthritis; inflammation; Alzheimer's disease; Parkinson's disease; stroke; Huntington's disease; amyotrophic lateral sclerosis; HIV; munue deficiency; human immunodeficiency virus infection; evere combined immunodeficiency; infection; autoimmune disorder; rheumatoid arthritis; Guillain-Barre syndrome; graft-versus-host disease; cancer; thyroid cancer; lung cancer; syndrome; graft-versus-host disease; kaposi's sarcoma; brain tumour; prostate cancer; ovarian cancer; leukaemia; inflammatory disorder; inflammatory bowel disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    immunodeficiency virus (HIV), severe combined immunodeficiency or infections), autoimmune disorders (e.g. rheumatoid arthritis, Guillain-Barre syndrome or graft-versus-host disease), cancers (e.g. thyroid cancer, lung cancers, small cell carcinoma, Kaposi's sarcoma, brain tumours, prostate cancer, ovarian cancer or leukaemias), or inflammatory disorders (e.g. inflammatory bowel disease or Crohn's disease).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding polypeptides with cytokine-like activities, useful
                                                                                                                                                                                                                                                                                                                                                                                  Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation.
polynucleotides and proteins are useful for screening peptides or small molecule inhibitors or agonists that are useful for treating these diseases. The polypeptide is also useful as molecular markers, or as a food supplement. The present sequence is a cytokine or cell proliferation/differentiation-related protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cao Y;

3,
         production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111
(AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication

                                 a clone, G52-24 (ATCC 98028), derived from a human PBMC cDNA library. The mucleic acid and encoded G52-24 secreted protein can be used for research purposes (as markers for tissues, molecular weight markers for gels, primers, probes, etc.), for nutrition (as C, N or carbohydrate source), as a cytokine for cell proliferation and differentiation activity, as immune stimulants or suppressors e.g. for viral, bacterial or fungal infections, for autoimmune diseases such as multiple sclerosis or

The invention relates to a protein comprising fully defined AZ302 I

C protein or BD127 1 6 protein. The polynucleotides are useful for

C expressing recombinant proteins for analysis and are also useful as

C chromosome markers or tags to identify chromosomes or to map related gene

C chromosome markers or tags to identify chromosomes or to map related gene

CC constituent introgen source and carbohydrate source. The proteins are useful

CC source, nitrogen source and carbohydrate source. The proteins are useful

CC combined immunodeficiency (SCID), autoimmune disorders (e.g. multiple

CC combined immunodeficiency (SCID), autoimmune disorders (e.g. multiple

CC reactions (e.g. asthma), myeloid or lymphoid cell deficiencies,

CC reactions (e.g. asthma), myeloid or lymphoid cell deficiencies,

CC reactions (e.g. asthma), myeloid or lymphoid cell deficiencies,

CC osteoporosis or osteobarthritis, peripheral nervous system disease),

CC peripheral neuropathy, Alzheimer's disease, Parkinson's disease),

CC coagulation disorders, inflammatory diseases, Parkinson's disease),

CC capulation myproxensitivity. Proteins are also useful for inducing

CC tumour immunity, for inducing bone, cartilage, tendon, ligament and/or

CC nerve growth or regeneration, for proliferating neural cells and for

CC inhibiting tumour growth. Proteins are also useful as othendrine for

CC inhibiting tumour growth. Proteins are also useful as othendrine for

CC inhibiting tumour growth. Proteins are also useful as othendrine for

CC inhibiting tumour growth. Proteins are also useful as othendrine for

CC inhibiting tumour growth. Proteins are also useful as offence represents

CC sequence represents the amino acid sequence of a human secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ---PA 148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     88 SSORFCDSODADLAQVESFOELNFLLRYKGPSDHWIGLSREOGOPWKWINGTEWTROFPI 147

```
The invention relates to isolated nucleic acid molecules encoding novel human secreted extracellular matrix proteins (SPS). The polymucleotides and proteins are used to prevent, treat a medical condition in e.g. thumans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased expression of SPs. The SP polymucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisense molecules may be administered to treat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPs by binding with the cells own genes and probes in diagnostic assays. The SPs may also be used as DNA probes in diagnostic assays. The SPs may also be used as antigens to probuce antibodies and to identify modulators (agonists and antagonists) of the SPs. The anti-(SP) antibodies and antagonists and antagonists of the SPs. The anti-(SP) antibodies and antagonists and antagonists of down regulate expression and activity of SP and as disorders include for example: immune/autorimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and Gaucher's disease), neurological diseases (e.g. Alzheimer's disease, Parkinson's disease), neurological diseases (e.g. corneal infections). Other uses include wound healing, maintenance (e.g. corneal infections). Other uses include wound healing, maintenance of primary corners before transplantation, support of cell culture of primary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       60 LCCG-SKDSTCSHCPSCPILWTRNGSHCYYFSMEKKDWNSSLKFCADKGSHLLTFPDNQG 118

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 23, Application US/09531056A
Patent No. 645563
GERRAL INFORMATION:
GESTIVE SET Existol-Wyers Squibb Company
TITLE OF INVENTION: DAM MOLECTLES ENCODING HUMAN CLAX PROTEINS AND THEIR SOLUBLE FUSI
TITLE OF INVENTION: PROTEINS
FILE REPERBACE: DB20 NPF
CURRENT APPLICATION NUMBER: US/09/531,056A
CURRENT FILING DATE: 2000-03-20
NUMBER OF SEQ ID NOS: 24
SOFTWARE: Patentin version 3.0
SEQ ID NO 23
LENGTH: 76
